What kind of products do customers typically buy together in a grocery store?

# customers	fruit	beer	candy	magazines	...
6.388.860	1	0	0	0	
898.973	1	0	1	0	
4.231.452	0	1	0	0	
5.123.433	0	1	1	1	
...	

Sorting by frequency ...

# customers	fruit	beer	candy	magazines	...
6.567.680	1	1	0	0	
6.549.840	1	1	1	0	
6.488.320	1	0	1	0	
6.388.860	1	0	0	0	
...	

... or creating a pivot table

- **design choices**
- how can you use the tool?

Design choices:

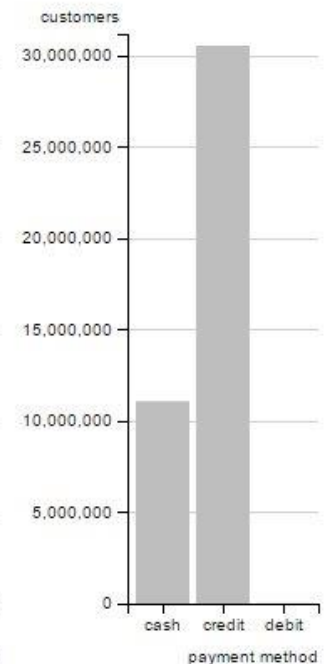

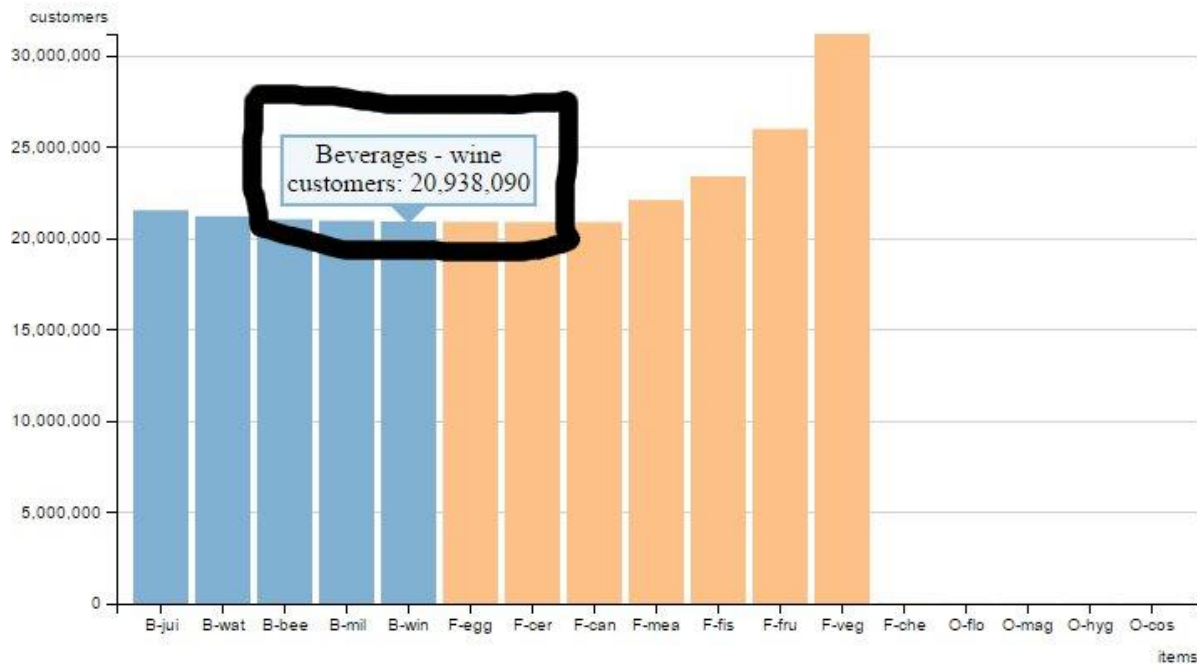

#1 – virtual area for tooltip

Design choices:

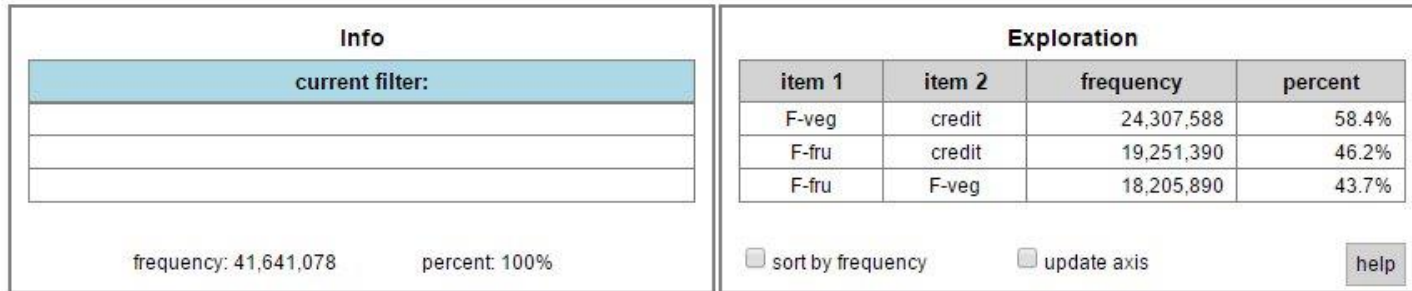

#2 – descriptive name of item in the tooltip

Info		Exploration			
current filter:		item 1	item 2	frequency	percent
		F-veg	credit	24,307,588	58.4%
		F-fru	credit	19,251,390	46.2%
		F-fru	F-veg	18,205,890	43.7%
frequency: 41,641,078		<input type="checkbox"/> sort by frequency		<input type="checkbox"/> update axis	
percent: 100%				help	

Design choices:

#3 – separate chart area from axis labels

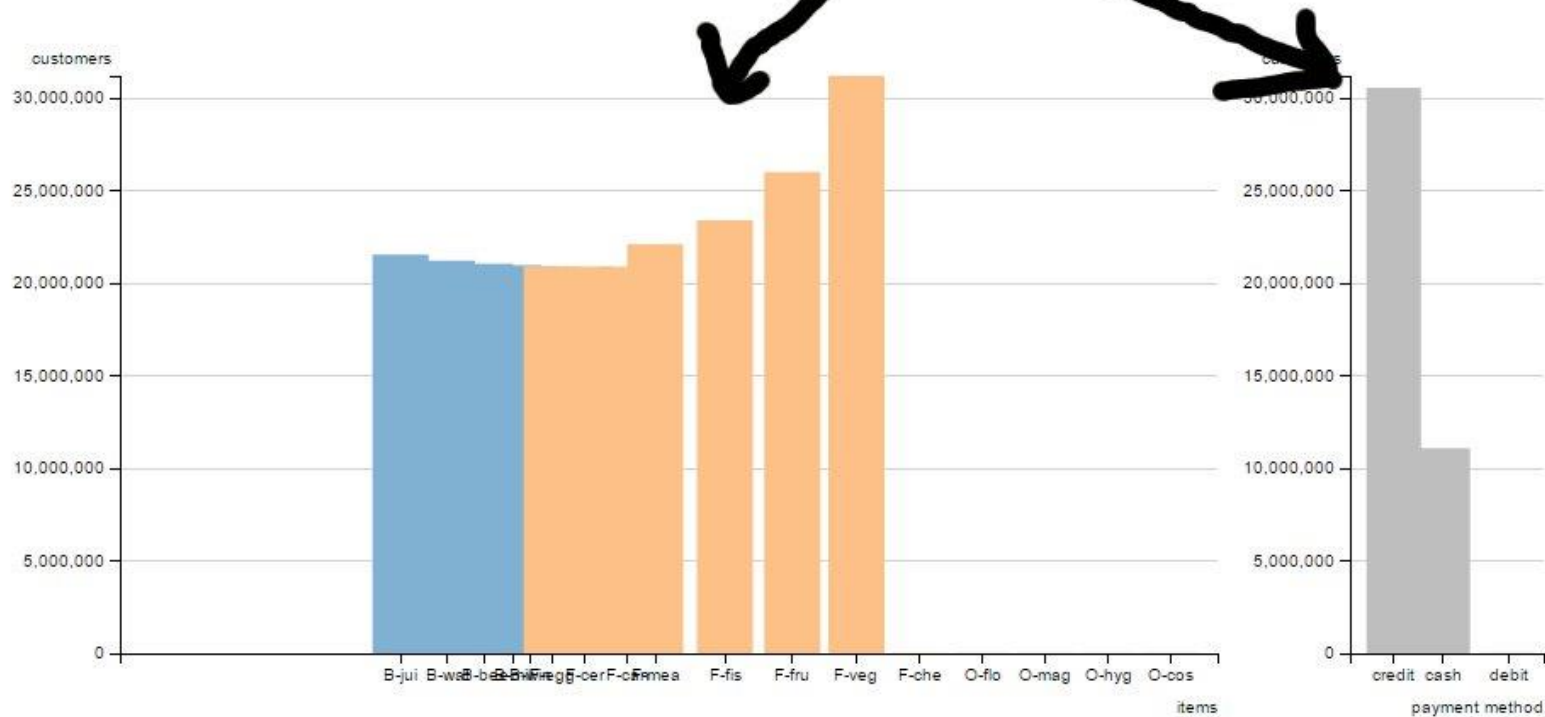

Design choices:

#4 – interactive exploration with algorithmic guidance

Design choices:

#5 – resorting with staggered delay

Design choices:

#6 – displaying OR selections

Info

current filter:

(+Beverages - milk || +Food - eggs || +Food - meat || +Food - cheese)

frequency: 36,837,974

percent: 88.5%

Exploration

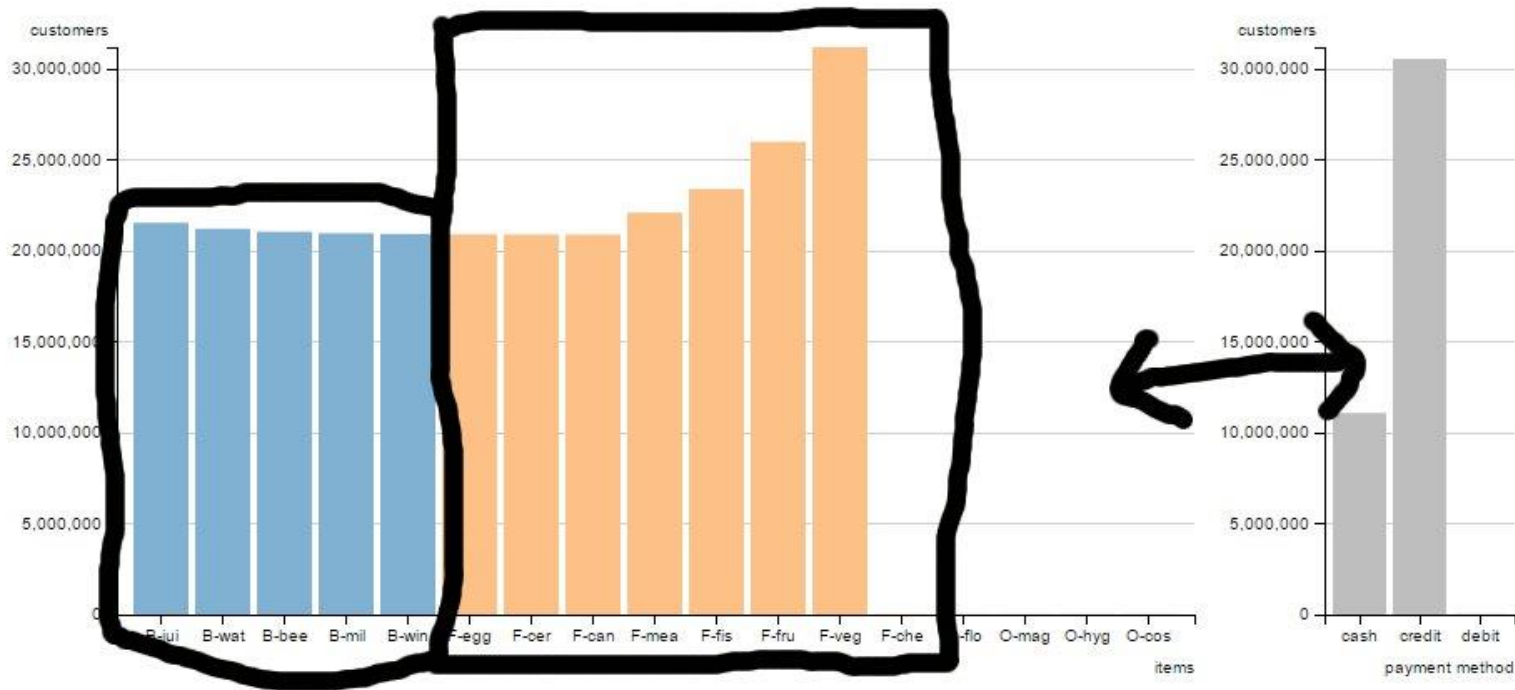

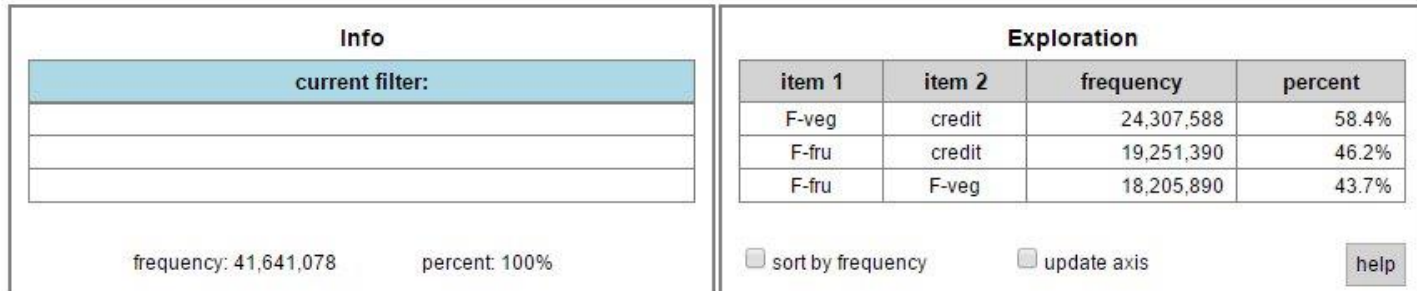

item 1	item 2	frequency	percent
F-veg	credit	21,495,868	51.6%
F-fru	credit	16,993,400	40.8%
F-fru	F-veg	16,042,240	38.5%

☐ sort by frequency
 ☐ update axis
 help

Design choices:

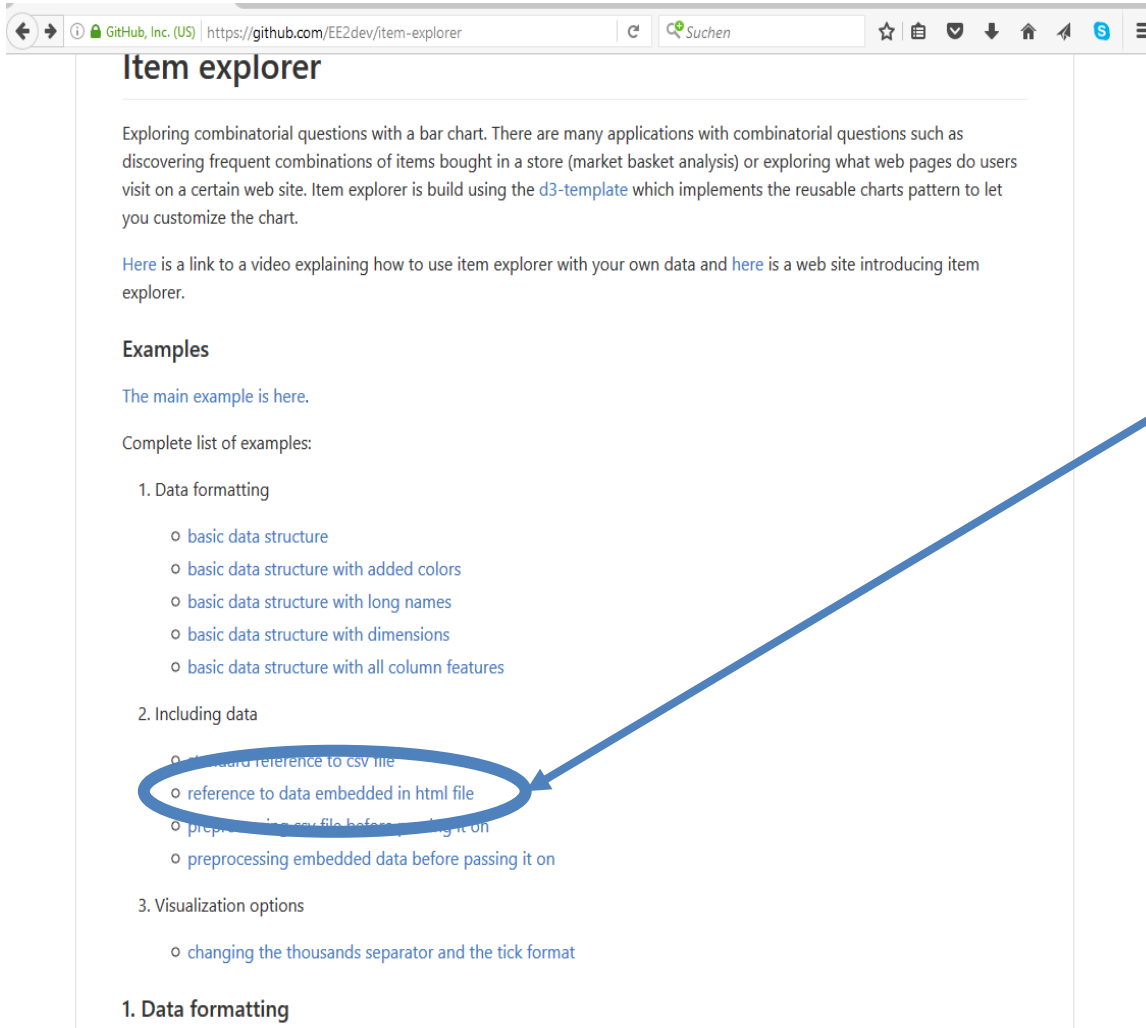

#7 – displaying additional structure

How can I use it?

The screenshot shows a web browser window with the URL `https://github.com/EE2dev/item-explorer`. The page title is "Item explorer". The main text describes the tool as a bar chart for exploring combinatorial questions, built using the `d3-template`. It includes links to a video and a website. Under the "Examples" section, there is a list of examples. A blue arrow points from the text "reference to data embedded in html file" in the list to the right-hand text.

Item explorer

Exploring combinatorial questions with a bar chart. There are many applications with combinatorial questions such as discovering frequent combinations of items bought in a store (market basket analysis) or exploring what web pages do users visit on a certain web site. Item explorer is build using the `d3-template` which implements the reusable charts pattern to let you customize the chart.

[Here](#) is a link to a video explaining how to use item explorer with your own data and [here](#) is a web site introducing item explorer.

Examples

The main example is [here](#).

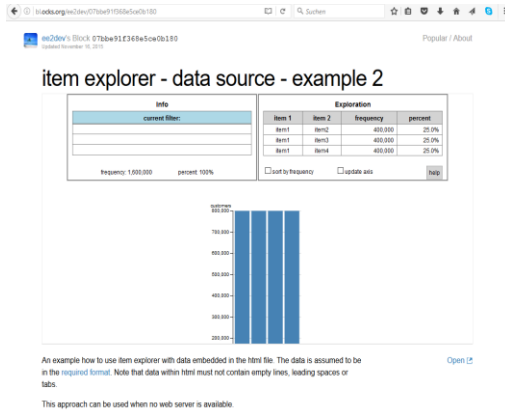

Complete list of examples:

1. Data formatting
 - [basic data structure](#)
 - [basic data structure with added colors](#)
 - [basic data structure with long names](#)
 - [basic data structure with dimensions](#)
 - [basic data structure with all column features](#)
2. Including data
 - [reference to data embedded in html file](#)
 - [preprocessing csv file before passing it on](#)
 - [preprocessing embedded data before passing it on](#)
3. Visualization options
 - [changing the thousands separator and the tick format](#)

1. Data formatting

- 1) Go to the github page
- 2) Click on the link:
„reference to data embedded
in html file“

How can I use it?

•
•
•

- 3) Scroll down to index.html
- 4) Copy the code and paste it into an editor. Save file as „index.html“
- 5) Change data in <pre></pre> tag to your data
- 6) Save file as „index.html“
- 7) Open file in browser

For data formatting or advanced visualization options, see documentation on the github site.
